Fig. 2B

Chemical structure of a dendritic polymer with $r=2$ and $k=2$. The structure shows a solid support (black circle) connected to a spacer (wavy line), which is then linked to a lysine (Lys) residue. This Lys residue is further linked to two more Lys residues, each of which is linked to two Arginine (Arg) residues. The branching is indicated by α and ϵ labels. The structure is labeled $(r=2, k=2)$.
